4

5 THE COURT: Good afternoon, ladies and
6 gentlemen. We're here in the SCO Group, Inc. vs.
7 International Business Machines Corporation on IBM's
8 motion to confine SCO's claims and to strike allegations
9 in excess of the final disclosures.

10 Counsel, I see some of the same players but
11 others that are different. If you'd make appearances for
12 the record, please.

13 MR. HATCH: Brent Hatch on behalf of SCO.

14 MS. BORUCHOW: Sashi Bach Boruchow from Boies,
15 Schiller & Flexner for SCO.

16 MR. PADMANABHAN: Devan Padmanabhan for SCO
17 group.

18 MR. TIBBITTS: Ryan Tibbitts. I'm the general
19 counsel for SCO Group.

20 MR. SCHAUGHNESSY: Good afternoon, Your Honor.
21 Tod Shaughnessy for IBM.

22 MR. MARRIOTT: David Marriott for IBM.

23 THE COURT: Thank you, Counsel. Counsel, I
24 have reviewed all the submissions related to this motion
25 and believe myself conversant with the issues. I am also

1 apprised of Judge Kimball's order of yesterday affirming
2 the Magistrate Judge's order of June 28, 2006. I'm not
3 certain but would ask counsel to address specifically in
4 their arguments how, if in any way, you believe that
5 Judge Kimball's ruling may affect this motion.

6 So, with that having been said, and this is
7 IBM's motion, Mr. Marriott.

8 MR. MARRIOTT: Thank you, Your Honor to answer
9 Your Honor's question, the disposition of the present
10 motion is dictated, Your Honor, by yesterday's order by
11 Judge Kimball as well as by the four prior related orders
12 that preceded it. Those orders, we would respectfully
13 submit, unequivocally compel the granting of IBM's motion
14 in the present circumstance. In fact, Your Honor, the
15 reasons for granting the present motion are far more
16 compelling than were the reasons for granting IBM's prior
17 preclusion motion.

18 The issues presented by the preclusion motion,
19 Your Honor, were whether SCO could proceed with that
20 allegedly misused material which was identified in its
21 final disclosures but not identified in the final
22 disclosures with the requisite particularity. And now
23 both Your Honor and Judge Kimball have said they can not
24 proceed with that allegedly misused material which was
25 not identified with the requisite level of specificity.

1 The issue presented by the present motion, Your
2 Honor, is whether or not SCO may proceed with respect to
3 material that is not identified at all in the final
4 disclosures, let alone identified there with requisite
5 specificity.

6 SCO's final disclosures, for example,
7 identified 326 lines of allegedly infringing material in
8 the Linux kernel, 326 lines. SCO's expert reports, Your
9 Honor, expand that number to essentially every file and
10 every line of code in the Linux kernel.

11 So, with Your Honor's permission, I would like
12 to do three things: First, I would like to emphasize the
13 critical facts which, we submit, are undisputed and which
14 are dispositive of the present motion.

15 Second, Your Honor. I would like to list for
16 the Court, and I emphasize "list," the reasons in support
17 of this motion. And I say "list," Judge, because since I
18 believe the present motion is dictated by the prior
19 orders, I believe Your Honor is familiar with the
20 rationale that would underlie the ruling that I urge upon
21 the Court.

22 And, finally, Your Honor, I would like to
23 respond to the primary argument offered by the SCO group
24 in response to IBM's present motion.

25 If I may approach, Your Honor, we have prepared

1 a little booklet which I hope will make it easy to follow
2 our presentation.

3 First, the facts, Your Honor. I know Your
4 Honor is familiar with the facts, but I would,
5 nevertheless, ask your indulgence in at least some
6 repetition for the sake of context here. If Your Honor
7 takes a look at the first tab within the binder, you will
8 see that SCO filed its Complaint in March of 2003. At
9 the same time, it began what the Court has, at times,
10 referred to as making a plethora of public statements
11 about the scope of its evidence. And at tab 2, you will
12 find reference to some of those statements with which I
13 know Your Honor is familiar.

14 From the beginning, Judge, we have asked SCO to
15 Identify the allegedly misused information with
16 specificity and in detail. And the requests that we
17 asked are, among others, included at tab 3 of the binder
18 we have given Your Honor. We did that, Your Honor,
19 because, as you know, I believe, SCO's claims implicate
20 literally billions of lines of allegedly misused code,
21 and you can see that at tab 4 of the binder.

22 We also did that, Your Honor, because the
23 nature of these claims requires a line-by-line analysis
24 of SCO's allegations, and if you look at tab 5 of the
25 binder, you will see, in what we have already previously

1 given Your Honor in connection with the preclusion
2 motion, a list of related copyright principles and then,
3 behind those principles, a set of the questions that
4 naturally flow from them. And answering those questions
5 is, by and large, a line-by-line exercise.

6 And it is for that reason that we asked, and I
7 believe Your Honor ordered a line-by-line recitation by
8 SCO. SCO declined. IBM moved to compel. Your Honor
9 issued two orders requiring the disclosure of that
10 information. I know they are familiar to you. They are
11 excerpted at tab 6. SCO nevertheless failed to provide
12 the information, Your Honor, and we moved for summary
13 judgment. And as I think you also know, Judge Kimball
14 denied IBM's motion for summary judgment with leave to
15 refile at a later date, which we have done, but, in
16 connection with that motion, observed that despite SCO's
17 public statements and the passage of, by that time,
18 nearly two years of litigation, it had adduced no
19 competent evidence of the alleged infringement.

20 And Your Honor can see that from the chronology
21 which appears at tab 1 of the Your Honor's book.

22 Following Judge Kimball's order denying IBM's
23 motion for summary judgment, we proposed to the Court
24 that it set a final deadline for the disclosure of
25 allegedly misused material, with an interim date

1 preceding it. We proposed, Your Honor, that that be the
2 end of the parties' ability to finally identify the
3 allegedly misused information. And an excerpt from our
4 proposal is found at tab 8 of the binder which Your Honor
5 has.

6 We were clear in that proposal, Your Honor,
7 that final meant final and that the parties were not to
8 attempt to use expert reports as a means of end running
9 the requirement to provide information finally in
10 specificity. SCO opposed that motion and, interestingly,
11 opposed it on the grounds that there was no need for such
12 an order because the Court already had a full arsenal of
13 power to cause a party not to be able to use information
14 not properly disclosed. And, if you look at tab 9 of the
15 book, you will see a quote from SCO's papers where it
16 indicates there is no reason for the order because the
17 Court already has that power.

18 On July 1, 2005 Judge Kimball effectively
19 adopted SCO's proposal and set a deadline for interim and
20 final disclosures. He made clear and the Court has
21 subsequently made clear that what was required is a
22 specific identification of that which is alleged to have
23 been misused. And so clear was it, Your Honor, I would
24 submit, that thereafter, as you will see on the
25 chronology, and at tab 11 of the book, IBM and SCO

1 entered into a stipulation of a related discovery matter,
2 and SCO stipulated that it would not disclose and that it
3 would not seek to use information not identified with
4 specificity within the final disclosures.

5 On the 22nd of December of 2005, the parties
6 submitted, exchanged their final disclosures, and SCO
7 identified, in its final disclosures, 294 items of
8 allegedly misused information. Some of those items
9 concern copyright infringement allegations. Some of them
10 concern breaches of contract. Very few of those items,
11 Your Honor -- and I emphasize this -- very few of them
12 are at issue on the present motion.

13 I would refer Your Honor to tab 12, if I may,
14 of the book. As to SCO's allegations of infringement
15 within the Linux kernel, it identified 326 lines of code,
16 the 326 I've mentioned previously. As to SCO's
17 allegations of breach of contract, it identified a
18 variety of alleged misused code, only two items of which
19 are relevant to this motion. One concerns JFS, which
20 stands for Journal File System. In that regard, SCO
21 identified 17 lines of code. It also identified certain
22 testing technology code and there identified
23 approximately 9,000 lines of code.

24 Now, for simplicity, Your Honor, what I would
25 like to do, with your permission, is focus you on the 326

1 lines of code because I think the point and the problem
2 that this motion seeks to address is illustrated as well
3 by the 326 as it is by reference to all. So, if you take
4 a look at tab 13 within the book, you will see a little
5 bit more detail about these 326 lines of code.

6 They fall into three categories: Certain
7 header file code. The final disclosures identify 181
8 lines of supposed header file code. Certain
9 specifications, L. specifications. There are 121 lines
10 identified. And then, finally, certain miscellaneous
11 code, which concerns memory allocation, of which 24 lines
12 were identified.

13 And Your Honor made clear, and I point you to
14 tab 14 of the book, that the parties were only to use
15 that information which was identified there with the
16 requisite specificity.

17 Now we moved, Judge, as you well know, to
18 preclude certain of the 294 items. The preclusion motion
19 did not address, did not concern the 326 lines that are
20 at issue here in the Linux kernel code. They didn't
21 concern the testing technology code here, and they did
22 not concern the JFS code.

23 Now, following the receipt of SCO's final
24 disclosures, IBM undertook discovery with respect to
25 these 326 lines of code. Now, Just to back up for a

1 second, if you remember, Judge Kimball denies IBM's
2 motion for summary judgment. The Court, in July, enters
3 an order indicating the final disclosures will be
4 required.

5 At that time, Your Honor, SCO identified no
6 code, as Judge Kimball acknowledged, indicating supposed
7 infringement. We believed then that roughly three months
8 of discovery with respect to what SCO would identify
9 would be sufficient, and we undertook, following the
10 Court's -- following the submission by SCO of its final
11 disclosures of discovery as those 326 lines of code, a
12 line-by-line related analysis, and on May 19, as you will
13 see from the chronology, the parties submitted their
14 opening expert reports.

15 IBM's opening expert reports addressed the 326
16 lines of codes which our experts had then spent five or
17 so months evaluating, evaluating on a line-by-line basis.
18 And I would refer you to tab 15, where you will see an
19 excerpt from the report of two of our experts. That
20 table, Judge, lists the files in which these 326 lines of
21 code are found and some of the analyses, and I underscore
22 "some," only some of the analyses that IBM's experts did.
23 And if you flip further into that same tab you will see
24 an excerpt from one of the Linux files, and you will see
25 the highlighted code which SCO contends was --

1 THE Court: What tab is that?

2 MR. MARRIOTT: This is tab 15, your Honor --
3 14, I'm sorry. You will see a blue chart, and behind the
4 blue chart you will see an excerpt from a file, and if
5 you look in the left margin, you will see colored dots by
6 each of the lines. Those colored dots reflect just some
7 of the analyses that were done on a line-by-line basis by
8 IBM's experts. If you look back at tab 5 and you look at
9 all of those questions, we asked those questions, and we
10 undertook those analyses as to each of those 326 lines of
11 code.

12 At the same time IBM submitted its expert
13 reports, you received reports from SCO's experts,
14 including the three reports that are at issue on this
15 motion. Each of those three reports in some respects,
16 not in all respects, exceeded the scope of SCO's final
17 disclosures. And, if you look at tab 16, you will see
18 that, Your Honor.

19 With respect to Linux, the final disclosures
20 had identified 326 lines. SCO's expert reports
21 effectively claim every file and every line of code in
22 Linux.

23 With respect to JFS, the expert reports
24 identified seven times the code identified in the final
25 disclosures.

1 Now, with respect to testing technologies,
2 there were an additional 15 thousand lines of code
3 identified.

4 Now let me point you to, if I may, to the 326
5 lines specifically, so if you look at tab 17, those 326
6 lines consisted of header files, specifications and
7 certain miscellaneous code. With respect to the header
8 files, Your Honor, no new additional code was identified.
9 With respect to the specifications, we went from 121
10 lines to essentially the entire ELF format which
11 represents, certainly, thousands of lines of code. With
12 respect to the miscellaneous category, we went from 24 to
13 a hundred.

14 Far more problematic, however, Judge, was not
15 adding lines of code within an existing category, though
16 that was clearly what is and was problematic; far more
17 problematic was identifying entire new categories of
18 alleged misused information.

19 The Cargill report, one of SCO's experts,
20 claims as misused the entire structure of the Linux
21 operating system as well as the entire file system of the
22 Linux operating system, as well as roughly all of the
23 system calls in Linux. That effectively amounts, Your
24 Honor, to claiming every file and every line of code in
25 the Linux kernel.

1 Now, also identified was new streams material,
2 which is a footnote here, Your Honor. That material is
3 not in the Linux kernel. We don't emphasize it because
4 our claim for a declaration of non-infringement is about
5 the Linux kernel, but there was also material outside the
6 kernel that was new for the first time in SCO's expert
7 reports.

8 Now, IBM moved for summary judgment on
9 September 25 of this year, and in November SCO filed its
10 opposition papers, and in those opposition papers,
11 opposition papers to IBM's motion seeking a declaration
12 of non-infringement relating to Linux, SCO argues, in
13 effect, that IBM's motion should be denied, and it should
14 be denied because IBM fails even to address all of this
15 new material identified by SCO for the first time in its
16 expert reports.

17 Your Honor was, as I indicated before, clear.
18 The parties were not to use, in connection with summary
19 judgment filings, material not identified in their final
20 disclosures. We promptly brought this motion to the
21 Court's attention. We did not and could not have
22 considered the code beyond the 326 lines in IBM's expert
23 reports. We didn't do it, Your Honor, because we believe
24 the Court has been clear from the beginning that that was
25 not required, and we could not have done it, Your Honor,

1 because it took us roughly six months, five, six months.
2 of evaluating the 326 lines, to do that analysis, and
3 that was with the benefit of discovery.

4 It would take, to put it mildly, a very long
5 time to evaluate all of this new, allegedly misused
6 information. Going from 326 lines of allegedly
7 infringing code to all Linux code files being supposedly
8 infringing, is like going from an arena, Your Honor, of
9 22,000 fans in which one is identified, to claiming that
10 all are, in some sense, implicated. And you can see that
11 at tab 18 of our binder.

12 And I would just remind you, Judge, as you
13 think about these issues, that in opposing IBM's first
14 motion for summary judgment, which SCO -- which Judge
15 Kimball denied, SCO argued that the Court should not
16 enter summary judgment because it would require roughly
17 25,000 man years to compare just one version of Linux to
18 one version of UNIX. And that is, effectively, now, what
19 IBM is being asked do.

20 So, why should Your Honor grant these motions?
21 Your Honor, the reasons why the Court should grant these
22 motions are on these facts I think familiar to the Court.
23 They are set out in IBM's papers in support of this
24 motion, and I will not belabor them here, Your Honor, and
25 though it's IBM's motion, we didn't feel, as Your Honor

1 may recall, that oral argument was even necessary in this
2 motion.

3 But let me emphasize three points, if I may.
4 First, Your Honor, the Court has been clear, I think
5 crystal clear, that the parties were not and are not
6 allowed to proceed in this litigation with respect to any
7 material that is not specifically identified, as the
8 Court has now laid out, in the parties' final
9 disclosures. No exceptions were made for end runs based
10 on information analyzed or discussed in expert reports
11 which followed. Yesterday's order makes that clear. The
12 preceding four related orders make that clear. The case
13 law makes that clear as illustrated in tabs 19 and 20 of
14 the book. Rule 37 makes that clear, and the parties'
15 stipulation, I respectfully submit, ought, in this
16 respect, to count for something.

17 Second, your Honor, the material that is at
18 issue here was not identified by SCO in the final
19 disclosures. And it certainly was not identified by SCO
20 with the requisite specificity required by the Court, and
21 I would refer you, in this regard, if I may, to tab 22 of
22 the book, the last of the tabs. Here, Your Honor, we
23 have indicated the material that is new, as a result of
24 SCO's expert reports. And based on SCO's opposition
25 papers, Your Honor, there is no link to this allegedly --

1 to this allegedly new misused material to the final
2 disclosures. This is taking SCO's opposition papers and
3 looking at the citations they provide.

4 As I indicated, the Cargill report claims the
5 entire overall structure of Linux. It is now identified
6 as allegedly infringing material, the entire structure.
7 Is there a citation in SCO's brief to the final
8 disclosures for that? No. As to the overall file
9 systems, there is no citation in SCO's papers to where in
10 the final disclosures that's found. It's not there.

11 In SCO's opposition papers, there is likewise
12 no indication of where, in the final disclosures, SCO
13 claims system calls. The 76 new miscellaneous items,
14 likewise, Your Honor, have no citation. What citation is
15 there? If you look toward the bottom of this chart,
16 SCO's expert is now claiming the entire ELF format is
17 infringed by their alleged copyrights in UNIX. And, in
18 support of that proposition, they point to item
19 numbers -- and this is the item numbers in their final
20 disclosures. They point, in their opposition papers to
21 item 171, item 272, item 273 through 275.

22 Well, let's look at those, Your Honor. Item
23 171, precluded by this Court in your order of 6/28/06,
24 affirmed yesterday by Judge Kimball as lacking the
25 requisite specificity. That could not support the claim

1 that this material was identified previously. Item 273
2 through 275, abandoned by SCO in its summary judgment
3 opposition papers as material not part of its claim, not
4 material in which it claims copyright. Item 272, Your
5 Honor, in fact makes only specific reference to certain
6 lines of code. It does not claim the entire ELF format,
7 which is what SCO's expert reports are now seeking to
8 claim.

9 And, finally, and just parenthetically, Your
10 Honor, the streams format, which, as I said, is not --
11 the streams code is not in the Linux kernel. The SCO
12 expert reports nevertheless identify new material
13 relating to streams. The only citation is to items 165
14 and 166 of SCO's final disclosures, which are also items
15 that were precluded by Your Honor's June order.

16 Now, before I close, Your Honor, if I may just
17 address the primary argument asserted by SCO as to why
18 IBM's motion should be denied. SCO says that IBM's
19 motion should be denied because the final disclosures
20 were not supposed to be what it calls co-extensive with
21 expert reports, and, Your Honor, I agree with SCO that
22 final disclosures and expert reports are not the same
23 thing. The final disclosures were, as has now been made
24 perfectly clear, to define the bounds of the parties'
25 claims. No material not identified with specificity in

1 the final disclosures was to be used in the case as a
2 supposed basis of liability.

3 The expert reports, Your Honor, are simply an
4 expert's opinions with respect to material properly
5 identified in the final disclosures. That does not mean,
6 however, that SCO may use its expert reports under the
7 guise of simply offering argument or explanation or
8 analysis. They may not identify entirely new categories
9 of allegedly misused information. They may not identify
10 any new allegedly misused information. That's what the
11 Court's order provided, quite plainly.

12 In its papers, SCO suggests, Your Honor, that
13 is no reason why the final disclosures should be held to
14 preclude SCO from, by way of its expert reports, adding
15 new information in support of its claims.

16 Your Honor, I would submit to you that there
17 are at least ten such reasons: The numerous IBM
18 discovery requests requesting that SCO specify its
19 allegations; the December '03 order of this Court; the
20 March '04 order of this Court; the July '05 order of this
21 Court and the June '06 order of this Court, as well as
22 Judge Kimball's order yesterday affirming that. There is
23 also Rule 26(e) which requires the supplementation of
24 interrogatory answers; Rule 37(c), which has,
25 effectively, a self-executing provision precluding a

1 party from using information that's not disclosed
2 pursuant to Court order; the parties' agreement, Your
3 Honor, and basic, basic fairness, I would submit.

4 If SCO's, what I would call, revisionist view,
5 Your Honor, of what the final disclosures required were
6 correct, then all of IBM's requests and all of the
7 Courts' orders and the parties' stipulation were for not
8 because SCO can now and could, with the submission of its
9 expert reports, simply reinvent its case, which is,
10 respectfully, what we believe happened here.

11 Your Honor, to close, this motion is not simply
12 about sandbagging. This motion is about sandbagging in
13 the face of multiple Court orders requiring the party to
14 disclose with specificity its allegations. And the issue
15 presented, I would respectfully submit, is simple: Is
16 SCO bound by the Court's prior orders and by its
17 stipulation with IBM to confine its claims to the items
18 identified with specificity in the final disclosures, or
19 can it ignore the Courts' orders, renege on its agreement
20 with IBM, and expand its case by way of its expert
21 reports to add new material that it could have disclosed
22 long ago, that wasn't the subject of fact discovery, that
23 wasn't addressed by IBM's experts, was not part of the
24 summary judgment filing and the introduction of which, in
25 this case, would result in what we believe is incurable

1 prejudice?

2 Thank you, Your Honor.

3 THE Court: Thank you, Mr. Marriott.

4 Mr. Hatch.

5 MR. HATCH: Good afternoon, Your Honor. We
6 also have a few slides I may use during the course of the
7 argument. Your Honor, put the way Mr. Marriott did, I
8 understand how that makes this look a little more
9 difficult than I think it really is. I think we have, in
10 essence, two ships passing in the night here, because our
11 arguments will be very much different than what
12 Mr. Marriott has put forward before you just now. In
13 large part, we believe that we have complied with the
14 Court's orders and that, in the case of misused material,
15 we have indeed disclosed that as was required by the
16 Court in the 2005 submission.

17 Now, what Mr. Marriott has done in their briefs
18 and in their argument today is they have, in our view,
19 commingled two concepts together; one being the misused
20 material and the second being legal theories regarding
21 structure and analysis involving the copyright,
22 particularly as put forth by Dr. Cargill in his expert
23 report.

24 Now, to give it in context, and I think that's
25 really -- if we get to the core of what this hearing is

1 about, it's about whether or not SCO's experts will be
2 allowed to give the opinions, the complete opinions that
3 they have issued. I want to make it very clear that IBM
4 has not challenged all of their opinions but only as to
5 things that relate, in their view, to undisclosed and
6 misused information. Now, that was made fairly clear in
7 the last briefing, and I will just -- I think it will be
8 a little easier for Your Honor -- slide 2. This was
9 something that was taken from IBM's reply memorandum in
10 support of a proposed scheduling order when we were
11 talking with Judge Kimball on setting the schedule and
12 setting these interim and final deadlines for setting
13 forth misused material.

14 And IBM, itself, said it proposes only that the
15 Court impose deadlines for the parties to identify the
16 alleged misused material. IBM's proposal requires
17 neither that the parties rely on experts, nor that any
18 experts that might be used by parties finalize their
19 expert reports before the close of all fact discovery.

20 Now, that was important to us at the time
21 because it seemed contrary not only to the schedule that
22 was being proposed but also to Rule 26 and the
23 understanding of the parties that the experts would be
24 required to do all their work, and, in essence, issue
25 their opinions prior to that December 2005 deadline. So

1 it was made very clear that IBM -- and they are making
2 the position where they are the one proposing the
3 two-part deadline, that they weren't requiring that.

4 And it goes on to say: "Under IBM's proposal
5 the parties' experts would need to reach final
6 conclusions before the close of fact discovery only with
7 respect to the identification of source code and other
8 material that is at issue in this case."

9 And, as Your Honor required, the large fight
10 that was going on at that period of time was over
11 identifying, as Mr. Marriott put it, the version, file
12 and line of source code that he had indicated that they
13 were going to go through line-by-line and try to rebut.
14 What is missed here -- and I think it's very, very
15 important, because what has happened here, particularly
16 if we go through with Dr. Cargill, is he simply is
17 applying Tenth Circuit law.

18 If we go to the Gates Rubber Case, it sets
19 forth an abstraction, filtration, comparison test for
20 determining whether or not there is a copyright
21 infringement. And, under that test -- and it's well
22 accepted Tenth Circuit law. As a matter of fact, I think
23 an analysis of the various Circuits on copyright with
24 regards to computer software, the Tenth Circuit is
25 perhaps ahead of almost every other Circuit in

1 establishing the law in this area.

2 And it sets forth the test for dissecting a
3 program at various levels of abstraction, starting with
4 looking at the main purpose of the software. And one
5 goes down through the list: The program structure or
6 architecture. Three is the modules. Four is algorithms
7 and data structures. And five -- we don't get source
8 code until the fifth level. And the last is object code.

9 Now, it's not required to find copyright, and
10 under the Tenth Circuit rules that you have to have all
11 these things, but you go through this abstraction
12 analysis, and that's exactly the test that Dr. Cargill
13 applied. Now, what they are saying now is that he has --
14 and I think he showed you his slide number 17, and I
15 think this is kind of where we're passing in the night a
16 little bit is that he indicated that, yes, we did in our
17 final disclosures set forth header files, specifications
18 and other miscellaneous lines, as he characterized it,
19 and then he put the large -- and I think this is done so
20 much for its dramatic effect. He has 5 million plus
21 lines.

22 But those are largely from overall structure,
23 overall file system and system calls. Well, that's
24 because Dr. Cargill is applying Tenth Circuit law. He is
25 applying his expert opinion, a structural analysis under

1 the Gates Rubber test established by the Tenth Circuit
2 and looking at the main purpose, the program structure,
3 architecture, modules, algorithms, data structures to
4 show that there is a copyright infringement here.

5 THE Court: Mr. Hatch, let me ask you this,
6 though: If I accept your premise, then what is the force
7 and effect of each of the previous orders which required
8 SCO to answer with specificity?

9 MR. HATCH: Well, but we have, Your Honor,
10 because, as he's pointed out, as to that particular
11 copyright claim, it is -- for instance, we talked about
12 JFS files. The entire JFS file was disclosed. I think
13 that was lost a little bit in his argument. We say the
14 entire JFS file was taken in the copyright infringement
15 theory. When we were talking about that, specifically
16 what the orders he was talking about is version, line and
17 file.

18 Those are not required for making this
19 particular expert opinion under the Gates Rubber test.
20 The Gates Rubber test doesn't say you have to have that.
21 Now, I understand that version, line and file,
22 particularly with some of the contract claims in this
23 case and some of the copyright claims, those would be
24 required, particularly if you were going show a literal
25 infringement, a literal copying.

1 Now, if you're going claim a literal copying,
2 there is no question you have to show the version, line
3 and file so you can do a side-by-side analysis, and we
4 did that in our December disclosures.

5 THE Court: Let me get back to my question,
6 though: If I accept your premise and were to deny IBM's
7 motion, doesn't that render meaningless everything we've
8 done up 'til now and every order that has been entered by
9 the Court?

10 MR. HATCH: Absolutely not. I think it renders
11 meaningless the Tenth Circuit's test for establishing it
12 because we did set forth, with specificity, for instance,
13 that we believe they infringed the copyrighted JFS files.
14 Mr. Marriott, though, now wants -- says, "You should find
15 against them and not allow them to do that because they
16 haven't shown version, line and file."

17 What I am saying is that that's not the Tenth
18 Circuit case in that instance. And that's why I don't
19 want to mix up the contract claims and copyright claims
20 because we have shown what you can do. And, as Rule 26
21 requires, and the Court has nowhere said -- given an
22 order saying Rule 26 doesn't apply in this case. Rule 26
23 clearly sets forth that it's expected, particularly where
24 the Court sets a scheduling order with an expert report
25 deadline and an opportunity to depose experts, that that

1 is the opportunity for that to be disclosed.

2 That issue is raised, I think, at length in
3 their reply memorandum. In the reply memorandum, they,
4 after we -- and I'll go back to the other experts to deal
5 with some of these other issues with regards to
6 particularly JFS and Dr. Ivey and Mr. Rochkind's expert
7 opinions. They don't respond to that in their reply
8 because I think if they had asked, they would have found
9 out that there wasn't an issue there.

10 But as to Dr. Cargill, they say: Well, why
11 weren't these copyright theories disclosed in Answers to
12 Interrogatories? Well, Rule 26 -- and I think, Your
13 Honor, I've put the relevant parts -- it's in a slide, I
14 think 14 and 15 in your book. It says, "Rule 26(e)
15 provides that a party is under a duty seasonably to amend
16 a prior response to an interrogatory only if the
17 additional or corrective information has not otherwise
18 been made known to the other party during the discovery
19 process."

20 And then, on the next page, Your Honor, we get
21 to the advisory notes for interpreting that, and it says,
22 "Where the Court has provided for and/or parties have
23 agreed to a period of specific expert discovery,
24 including expert reports and depositions, it is the
25 specific period of expert discovery that serves as the

1 means of interrogatory responses."

2 So, what the rule is essentially saying is --
3 well, they have said that, well, you didn't disclose
4 anymore detail. And Mr. Marriott got up and said that in
5 his argument that -- why didn't you respond to the
6 interrogatories? The rule is very clear, and that's what
7 we applied, is that when an expert is going to address
8 these types of issues; not the version, line and file,
9 but the structure, selection, those types of arguments
10 that are under the Gates Rubber test under the Tenth
11 Circuit, those have been disclosed. An expert report was
12 given. The deposition was allowed to be taken, and it
13 went forward.

14 Now, they, in response, in their brief, have
15 indicated that they were somewhat -- I think they called
16 it astonished that -- about these new claims that they --
17 in the reply brief, I think they used the word, you know,
18 it's completely changed the whole concept of this case
19 and that somehow what Dr. Cargill, in particular, in
20 making his analysis of the copyright claims, that this is
21 somehow changing the whole case.

22 Well, that's just simply not true because if we
23 go all the way back -- if we go back -- and I would refer
24 Your Honor to pages 9 through 11 in the booklet I gave
25 you. We can go back as far as March of 2004 where IBM

1 clearly understood, and the first cite there is from
2 their Second Amended Counterclaims, where they allege
3 that SCO threatened to sue IBM for copyright infringement
4 with respect to Linux.

5 And we go through each one. May 18, 2004. IBM
6 asserted that one critical element that SCO must show is
7 that Linux is substantially similar to the alleged
8 copyrighted work. We're talking about a copyright claim.
9 May 11 and July 9, they attach to their pleadings the
10 2004 Fortune Magazine article called "Gunning for Linux,"
11 which said SCO is complaining not just about verbatim
12 copying -- now, that's version, line and file, remember,
13 version, line and file -- but also about the purloining
14 of the code's structure, sequence and/or organization.
15 There's two different things there. And that is the
16 subject of an expert opinion.

17 You can't show version, line and file for
18 structure, sequence and/or organization. That's based on
19 the Tenth Circuit case on an overall look of the factors
20 that I stated to you out of the Gates Rubber case.
21 That's not a version, line and file analysis. And so
22 that's why I say, in essence, what IBM is doing here --
23 and this is why I don't think Judge Kimball's order
24 applies to the matters that we are talking about today.
25 I understand they want to meld it into it. And he

1 says -- you know, he says it's dispositive. Well, it's
2 not dispositive because the analysis that Dr. Cargill is
3 doing isn't a version, line and file analysis.

4 And they have known that since 2004. Now they
5 talk about surprise. They talk about undue surprise.
6 They talk about inability to cure, and yet they have
7 known since 2004 what that theory is. The only thing
8 they haven't had is one thing, until May of 2006,
9 Dr. Cargill's report. Well, that wasn't due until then.
10 And what they are trying to do now is kind of reverse the
11 whole order. And even though in the -- from their brief
12 that I read, where they said: "Oh, we understand you
13 don't have to disclose your expert analysis and theories
14 as of December of 2005," now, essentially, they are
15 telling Your Honor you should, by this order, say that
16 they should have done that by December of 2005, despite
17 the fact that the Court order from Judge Kimball that
18 said you've got until May of 2006 to do it.

19 They knew about it in 2004. They knew it was
20 coming. They prepared for it, and we disclosed it. Now
21 they talk about undue -- I mean surprise. They talk
22 about it's -- they can't cure now. I find that kind of
23 interesting, too. And, by the way, I didn't go through
24 all of these. Pages 9 through 11 give numerous examples
25 of their not knowing about these copyright claims. But

1 what they did here -- and I think this is what's, I
2 think, a little not right -- and what -- and we heard
3 Mr. Marriott talk about what's fair -- is IBM really
4 created their own undue prejudice here because, despite
5 the fact that since 2004, at least, and probably before
6 that, they knew this copyright claim, based on structural
7 analysis, was coming. And the only way it could come is
8 through an expert report.

9 I'm not sure what they think we should have
10 said in the December submission. That was for, remember,
11 misused material, where you're talking about the entire
12 structure being in. I think if we had put a line that
13 said the entire structure, they would have been in
14 saying, "Give us version, line and file, but, again, that
15 wasn't the analysis.".

16 But what did they do? They go -- and I'm on
17 page 16 of the slides I gave you. They had an
18 opportunity to ask Dr. Cargill and the other experts,
19 when they deposed them, about these theories. And they
20 intentionally chose not to do so.

21 In Dr. Cargill's deposition, for instance, IBM
22 asked no questions about his structural analysis or
23 collective work analysis. And the collective work
24 analysis he gave was under the Tenth Circuit's law in
25 Transwestern. It wasn't, again, a version, file and

1 line. It's under Tenth Circuit law that establishes that
2 that be done under an expert analysis.

3 And then, in the Dr. Rochkind deposition,
4 again, IBM asked no questions about the material they
5 complain about here either. So, they purposely shut
6 their eyes, even though since 2004 they knew it was
7 coming, because they wanted to come here and make this
8 kind of an argument, which is somewhat disingenuous,
9 because they know it doesn't revolve around version, file
10 and line.

11 Now I want to go back for a minute because I
12 got a little bit ahead of myself. I want to talk about
13 some of the other items that they -- that IBM has
14 complained about here that we did not disclose in the
15 December 2005 submission. And one of the other experts
16 that they challenged his opinion, and they want you to
17 limit his opinion by the course of their motion today, is
18 Dr. Evan Ivey.

19 Now, Dr. Ivey is the expert who gave an opinion
20 on these journal file systems, the JFS systems that are
21 at issue here. Now, in our December submission, we
22 disclosed to IBM that we believed the entire JFS file
23 system was misused material. Now, I don't think
24 Mr. Marriott disputed that. I think what he said -- and
25 certainly in his briefing -- but in his argument was,

1 "Well, we wanted specific lines."

2 And, in this particular instance, we indicated
3 the entire file was misused information. And we also
4 identified the JFS system as a derivative of the UNIX
5 System V. Now, SCO provided examples of that. Dr. Ivey
6 concluded his report saying that the JFS was a derivative
7 of the UNIX System V system and that IBM disclosed the
8 entire file system of Linux. That's why we claim the
9 entire thing. We believe IBM disclosed the entire file
10 system into Linux.

11 Now, IBM's complaint is that Dr. Ivey
12 references additional files in his JFS analysis that were
13 not included in the December submission. That's just not
14 true. SCO disclosed -- the JFS was a particular area of
15 concern for us, and SCO disclosed, one, the entire
16 system. The only additional files that were mentioned by
17 Mr. Ivey are simply further examples of how IBM's JFS
18 system derived from System V.

19 Those further examples were not discrete
20 misused material. Now, the items also -- and part of the
21 analysis here, since this is a discovery motion, has to
22 be -- under Tenth Circuit law, has to be whether there's
23 any undue prejudice, even if you were to find the facts
24 are as IBM states they are.

25 And, in response to Dr. Ivey, our expert who

1 gave this analysis, they put up a Dr. Davis. And he
2 concluded, of course, that JFS was not derived from
3 System V, but he did it by a machine comparison. He
4 didn't go line-by-line or any of the things that Dr. Ivey
5 used. It was totally irrelevant to his analysis. He
6 just did a machine comparison, and so they couldn't
7 possibly be prejudiced because it had absolutely nothing
8 to do with the way Dr. Davis looked at it. He didn't
9 even -- he didn't evaluate or analyze any of the examples
10 that we gave, even in December. And so -- and they have
11 conceded we gave examples in December.

12 So, as to those items regarding Mr. Davis --
13 Mr. Ivey's expert opinion, we disclosed all of them. We
14 don't concede that we didn't disclose anything. We did.

15 The second category of material IBM challenged
16 is the testing material cited by Mr. Rochkind, our
17 expert, again, his opinions on testing technology. Now,
18 he concluded in his report that IBM contributed certain
19 valuable testing technology to Linux. IBM's complaint is
20 that his analysis of the testing technology included,
21 again, additional material not included in the December
22 submission. Again, we don't believe that that is true.

23 The files that they are disputing were not
24 material -- were not material that SCO claims was
25 misused. These were additional testing files. And by

1 that what I mean is what he was simply doing, in
2 virtually every file that IBM is complaining about, is
3 using files, not necessarily because they were misused,
4 but to set a foundation to put, say, a particular IBM
5 programmer in a particular -- set a foundation to put him
6 in a particular time and place to show that he -- this
7 particular programmer was the one that was making
8 contributions.

9 Now, that's not misused material, and that was
10 what was required under the Court's order. It's just
11 further support of Dr. Rochkind's opinion that IBM was in
12 a position where they contributed material improperly
13 into Linux.

14 He complains -- they complain -- IBM also
15 complains about two documentation files. Now, that's
16 also not relevant here either because the document files
17 that they are talking about were simply used by
18 Dr. Rochkind to explain that an SPIE test, which were
19 disclosed in the December filing, and MPPIE tests, are
20 two terms for the same thing. So, again, it's not a
21 misused file, it's part of his expert analysis showing
22 that the things that were disclosed were improperly used.

23 And so we don't believe in either the case of
24 Mr. Ivey or Mr. Rochkind there's any analysis there, and
25 that's why I said earlier that those two arguments --

1 when we filed our opposition brief, in their reply they
2 don't address those any further, and I think, in part,
3 because there really is no other answer to those issues.

4 Now, the last thing you heard talked about --
5 not the last thing but one you heard talked about, and,
6 again, we're back to Dr. Cargill's report. Mr. Marriott
7 talked about system calls. Now system calls are specific
8 words that developers use to come up -- to come up with
9 to talk to an operating system to get it to perform
10 certain tasks.

11 Now, I think Mr. Marriott gave you a slide that
12 indicated that we didn't disclose any system calls in
13 December. That's just absolutely not true. I will tell
14 Your Honor, we disclosed -- and I don't know the exact
15 number -- but we disclosed a lot of those. And here is
16 the one instance where there were additional materials
17 disclosed; the only instance, I think, but I will explain
18 to Your Honor why I don't think it's particularly
19 relevant.

20 Dr. Cargill did disclose some additional system
21 calls, okay? But those were part of his overall
22 structural analysis, and they were not relied on
23 specifically for them as a particular misuse. They were
24 to show, as additional examples, as the ones that had
25 already been disclosed, of the structural copyright

1 problems, to show that this was an overreaching thing, to
2 show that IBM also understood that. And they, through
3 their expert, understood a structural analysis was being
4 made.

5 IBM's expert, Dr. Kernagen -- I hope I'm
6 pronouncing that right -- he didn't address system calls
7 individually. He addressed it as an overall system,
8 which is the way I have been stating we should be looking
9 at it -- the Court will look at it at trial. In other
10 words, there is no prejudice. There is nothing that they
11 have to look at specifically regarding system calls to be
12 able to understand SCO's legal analysis and theories
13 regarding the copyright claim in that regard.

14 Mr. Marriott mentioned the stipulation. The
15 stipulation, I'm not sure why it's relevant here. It has
16 very limited relevance. That was a reaffirmation, I
17 think is the best way to describe it, of the December
18 submission and, as I have argued, I don't think we have
19 violated the December 2005 submission. It only addressed
20 discovery issues, and it did not address -- it did not,
21 as I don't think Mr. Marriott said, and I hope the Court
22 didn't think that he was alluding to that somehow that
23 stipulation changed the order -- the December -- the
24 order for the submissions on December 2005, and it
25 certainly did not say that expert reports giving legal

1 analysis -- I mean expert opinion and analysis of
2 structure were not going to be allowed in May of 2006 in
3 amending Judge Kimball's scheduling order in that regard.

4 THE COURT: Mr. Hatch, why, if there are issues
5 that remain unclear at the time an order is entered, a
6 decision made, is that not brought back to the Court for
7 consideration?

8 MR. HATCH: If the order is unclear?

9 THE COURT: If the order is unclear as to what
10 the meaning of the December cutoff time is and what it
11 includes, why do those matters remain for discussion at
12 this late day?

13 MR. HATCH: Because I don't believe they were
14 unclear. I believe they are being made -- they are being
15 made -- there is being an attempt to make them unclear
16 now. I don't think they are unclear. As my argument has
17 made clear, we understood those, and we disclosed the
18 misused information. The types of materials they are
19 complaining about now aren't part of that order is what
20 I'm arguing, and I don't think it's unclear at all. And,
21 as a matter of fact, that's why I have argued and set
22 forth, one, from their brief, that they understood
23 that the experts would come later and that the experts --
24 and under Rule 26, it says that -- it understands that
25 when a Court orders that period, that the experts are

1 going to produce something later.

2 And so it would defy any logic --

3 THE COURT: Isn't there a difference between --
4 that the experts would produce explanation later or give
5 a more detailed opinion, isn't that something different
6 from expanding the context of the information at all? If
7 you were required, in order after order, to provide, with
8 specificity, the information, how can you then order --
9 or argue now that that should be totally expanded?

10 MR. HATCH: Because we did provide that, Your
11 Honor. What the expert does is it puts meat on the
12 claims. I mean, I don't want to get into a position
13 where I say the expert, in giving his opinion -- I think
14 there is a fine -- I don't even think it's a fine line.
15 I don't think Your Honor is saying that an expert, to
16 give specificity, has to give his whole opinion before
17 its due under the Court's scheduling order.

18 THE COURT: No. But his whole opinion cannot
19 be then used as a mechanism by which to expand what you
20 couldn't get before.

21 MR. HATCH: I understand, but I don't -- what
22 I'm saying is they didn't do that. Where did he do that?
23 I mean, what IBM hasn't got up and told you is -- what is
24 it they would have had him say to disclose this structure
25 analysis that, for instance, Dr. Cargill gave? Because

1 they knew about it. We just read -- I gave you three
2 slides that show they understood that since 2004, so I'm
3 not sure what more specificity to let them know that
4 there was a copyright claim, and they even used the
5 words -- and remember, we read them -- "a structural
6 claim."

7 That's what Dr. Cargill did. They knew that in
8 2004. So, what more specificity would they need? They
9 haven't identified that.

10 THE COURT: Well, then, let me go back to
11 another question. You said earlier in your argument
12 something to the effect that even if the Court were to
13 find that there had been, in essence, a violation of the
14 December cutoff date, that they weren't prejudiced. Are
15 you conceding?

16 MR. HATCH: Oh, absolutely not. I made that as
17 a matter of argument because, even if the Court -- and
18 let me be very clear. I don't concede it at all. But
19 even if the Court, for whatever reason, were to give
20 credence to this, the Tenth Circuit -- and that's a very
21 good point, Your Honor. I had my associate Mr. Douglas
22 pull the Tenth Circuit cases regarding prejudice, and I
23 was able to give him some guidance on that because I
24 would like to think it's a seminal case in the Tenth
25 Circuit that is one that I argued there. Probably not,

1 but they -- the Tenth Circuit has been very clear. It
2 has a four-part test.

3 But what it potentially boils down to is that
4 even in a situation like this, even if Mr. Marriott was
5 right, there has to be a prejudice to him, and the Court
6 has been very clear that basically it would have to
7 disrupt the trial. And there are no cases -- there are
8 no cases where a Court has excluded, merely on a --
9 excuse me, I read that wrong. Every one of the cases has
10 said that the exclusion of evidence is disfavored because
11 airing of all issues is the goal of our judicial system.
12 And you get cases where even -- where this comes up where
13 something new -- allegedly new -- we're saying here it's
14 not new, it's just a theory that came and was produced
15 in a timely fashion when Judge Kimball ordered it to be
16 produced, i.e., in an expert opinion.

17 But there are even cases where those types of
18 things are disclosed at trial, and if it can be cured
19 there -- and I have been involved in those kind of trials
20 where someone came up with something new and we objected,
21 and the Judge said, "You can take the deposition tonight,
22 and we'll start again tomorrow at nine."

23 THE COURT: This won't be cured by an overnight
24 recess.

25 MR. HATCH: I understand that, but what I'm

1 saying is: Here there's not even a cure because I've
2 gone back and showed Your Honor, from their own briefs,
3 where it doesn't even have to be cured. They have been
4 aware of it forever. And where Mr. Marriott says we'd
5 have to go back -- the reason he -- remember why he's
6 prejudiced? One. In his brief, he said the biggest
7 prejudice was that we're coming up on the trial. Okay?

8 No mention of that today because we don't have
9 a trial date anymore, and largely at the urging of IBM,
10 who has now argued that the Novell case, which I think
11 Your Honor is also aware of, should go first. And that's
12 not even set for trial until September.

13 And my point is: The Tenth Circuit is very
14 clear that where you have time before trial to cure an
15 alleged problem, you -- the Court should always give it.
16 But Mr. Marriott's next argument and the reason I think
17 he gave the slide 17 is he put this 5 million plus lines
18 of code, and he has indicated to you: Gee, that's going
19 to be a huge prejudice because we're going to have to go
20 through -- what did he say -- 21 man years to go through
21 those lines of code.

22 Well, Your Honor, I've got one fairly simple
23 answer for that. I think that is a complete red herring
24 because, you know, we had an expert. What they are
25 talking about is countering our expert, and that is

1 Dr. Cargill. Dr. Cargill didn't spend 21 man years, did
2 he? And the reason he didn't is because the Tenth
3 Circuit doesn't require that under the Gates Rubber case.

4 Dr. Cargill followed Tenth Circuit law, and
5 Tenth Circuit law has you look at the structure. It has
6 you look at the items that are listed from that case. It
7 doesn't say -- and this is why I think we're kind of
8 talking over each other and they are trying to get back
9 to version, file and line. It isn't relevant. And
10 Dr. Cargill was able to do it in a relatively short
11 period of time. But they want Your Honor to say that,
12 oh, Tenth Circuit law requires version, line and file.
13 It does not.

14 And that 21 man years to do this is just not
15 relevant. If Dr. Cargill can give the opinion in a
16 period of months, certainly they can cross examine on it
17 and do the same thing. And, indeed, they have. They
18 have put in expert reports to contradict these people.

19 THE COURT: I can't help myself. It would
20 probably, then, take only about seven woman years, right?

21 MR. HATCH: I'm not going there, Your Honor.

22 THE COURT: Go ahead.

23 MR. HATCH: But, you know, I have cited Tenth
24 Circuit law, and the cases -- I would say the premier
25 case on that really is Woodworkers, the case I argued,

1 and this case called Jacobson vs. Deseret Book, both
2 Tenth Circuit cases. The Jacobson case actually cites
3 Woodworkers, which basically says the challenged behavior
4 must substantially have interfered with the aggrieved
5 party's ability to both prepare for and proceed at trial.
6 ~~We don't even have that date, and all those cases talk~~
7 about the ability to cure.

8 Now, they cited one case. And it's pretty
9 telling to me, the case they cited was a District Court
10 in an unpublished opinion. And this is what they are
11 trying to get you to rule on, on prejudice, an
12 unpublished District Court opinion out of the Northern
13 District of Illinois. That is a Seventh Circuit case.
14 Well, if you go to the published opinions in the Seventh
15 Circuit, you get -- you get the exact same rule as in the
16 Tenth Circuit.

17 And it's very interesting because if you go to
18 a case called Keech vs. U.S. Trust, which is at 419 Fed
19 3d, 626, and at page 640 -- this is a 2005 case out of
20 the Seventh Circuit -- it sets forth the exact same test
21 as the Tenth Circuit. And guess what it cites? The
22 Woodworker case. It cites the Tenth Circuit case. It
23 says you should only exclude the evidence if there is no
24 ability to cure.

25 And that's certainly not the case here. It

1 would be the case if Mr. Marriott is right and they have
2 to go look at 5 million plus lines, but how did our
3 expert do it? Our expert's theory is a structure theory,
4 and that doesn't require that. And he ignored that.

5 THE COURT: Mr. Hatch, I'm going to give you
6 ~~five minutes to wrap up on this, and then I'll give you~~
7 each ten, 15 minutes.

8 MR. HATCH: I think that's basically -- let me
9 just real quick, because I kind of -- oh, they are
10 pointing out that I may have misspoke, and it's a point
11 that I think is important. The JFS -- and I'm sorry, I
12 did do that. When we are talking about the JFS, those
13 are contract claims as well. That's one of the
14 reasons -- there we are looking -- in large part, we are
15 looking at specifically what was taken to show the
16 contractual violations under version, line and file. The
17 JFS is a contract -- is part of a contract claim.

18 When I'm talking about Dr. Cargill dealing with
19 our copyright claims, that's dealing with the structure
20 claims. I think that is what I have now.

21 THE COURT: Thank you, Mr. Hatch.
22 Mr. Marriott.

23 MR. MARRIOTT: That you, Your Honor. Nothing
24 I heard, Your Honor, suggests or, I think, in any way
25 recommends the right result here is to deny IBM's motion.

1 Let me address, if I may, Mr. Hatch's arguments. First
2 Mr. Hatch -- this is not in the order in which he made
3 them. I will begin in somewhat reverse order. He
4 suggests in closing, Your Honor, that the Court, in some
5 respects, lacks the authority here and there isn't ample
6 authority to permit the granting of IBM's motion. And he
7 refers to several cases.

8 There is ample authority, Your Honor. I would
9 cite the Court to the cases at pages 19 and 20 of the
10 book that we provided Your Honor. I would cite the Court
11 to its own decision of 6/28 and to Judge Kimball's
12 decision of yesterday. The burden here is no more than
13 the burden that IBM faced with respect to its preclusion
14 motion, and as I indicated at the outset, this is a far
15 more compelling case, notwithstanding Mr. Hatch's
16 arguments, which simply cannot be squared with the facts
17 as they exist in SCO's final disclosures.

18 Moreover, Your Honor, as to what the Court's
19 authority scope previously itself acknowledged, it even
20 invited the Court to not enter the order requiring the
21 final disclosures because it said the Court had a full
22 arsenal with which to deal with exactly this situation,
23 and I refer you to tab 9, Your Honor, of our book for
24 that.

25 Now, Mr. Hatch read from IBM's brief in

1 connection with our request that Judge Kimball enter the
2 deadline for final disclosures, and it's one of the
3 slides in SCO's papers. And he suggested to Your Honor
4 that IBM had said to Judge Kimball and to SCO that in
5 entering the final disclosure deadline, the parties need
6 ~~not worry about experts because that's something we'll~~
7 deal with later on. I would suggest, Your Honor, that
8 you look at the brief that IBM attached to its reply
9 papers and submitted to Judge Kimball in connection with
10 this request, which says the opposite of what Mr. Hatch
11 represents.

12 At page 4 of that brief we said, quote, "Unless
13 the Court imposes a deadline by which the parties must
14 identify the allegedly misused material then they may not
15 learn the identity of the material they are alleged to
16 have misused until after the close of fact discovery or
17 potentially even expert discovery, when it would be too
18 late to prepare a defense to claims related to the
19 material."

20 At page 5. "No party could contend that
21 another party --" this is IBM's proposal. "No party
22 could contend that another party misused material not
23 identified by the August 11 --" which was then the
24 date -- "deadline. No expert could opine as to the
25 misuse of material not identified by the deadline."

1 We could not have been more clear that expert
2 reports, as we proposed it, were not to be used as a
3 means of adding, identifying new allegedly misused
4 material.

5 And finally, on page 6, your Honor, of the same
6 paper: ~~"Moreover, requiring the parties to disclose the~~
7 allegedly misused material before the close of all fact
8 discovery will allow the parties to engage in meaningful
9 expert discovery and refine the issues in dispute for
10 summary adjudication. The parties may or may not require
11 the assistance of experts to identify the material they
12 contend one another misused. If they do, then their
13 experts can assist them in making their disclosures."

14 "Expert discovery is not the time, however, for
15 identifying the allegedly misused material. It should be
16 done in advance of expert reports so that the parties'
17 experts can focus on what is really in dispute. It would
18 make no sense and would plainly be unfair to allow either
19 party to identify the allegedly misused material for the
20 first time by way of one of its experts," which is
21 exactly what has happened, Your Honor, in this case.

22 Mr. Hatch waxes on, Your Honor, about the Gates
23 Rubber case. Well, Gates Rubber was the law at the time
24 this case began. This structure, sequence test to which
25 Mr. Hatch refers is nothing new. If it were part of

1 SCO's case then, as it claims by reference not to its
2 discovery responses, Your Honor, but to a newspaper
3 article and statements made to a reporter; if it were
4 part of its case then, great. It should have disclosed
5 the particulars of that claim pursuant to the Court's
6 orders.

7 Mr. Hatch suggests that somehow the word
8 "structure" tells IBM something particular about its
9 allegations. It says essentially nothing, Your Honor.
10 It's essentially like saying that because the party knows
11 the party with whom it's in litigation has a contract
12 claim or a claim for a breach of a disclosure provision,
13 that somehow it's understood what it is precisely the
14 case is about.

15 Mr. Hatch asked the question: What is it that
16 IBM wants to know about the structure of Linux that it
17 somehow didn't know from the beginning of the case? What
18 we wanted to know, Your Honor, and what the Court
19 required SCO to provide was a detailed, specific
20 identification of SCO's theories. And I would refer you,
21 if I may, to tab 6 of the book.

22 What we wanted, Your Honor, we set out in our
23 discovery requests -- and I won't burden you with all of
24 them -- the same discovery requests that Your Honor
25 adopted, as written, into her orders, multiple orders,

1 words with which Judge Kimball has now, as of yesterday,
2 concurred.

3 And in Interrogatory No. 12 we said, "Please
4 identify with specificity all source code and other
5 material in Linux to which it has rights."

6 And then in 13, "Describe in detail how IBM is
7 alleged to have infringed plaintiffs' rights."

8 To tell IBM that it knew there was a -- that
9 this was a structural related case is to tell us nothing,
10 Your Honor. The statements that Mr. Hatch seizes on as
11 somehow disclosing that IBM knew and that support
12 Mr. Hatch's assertions that we have known all along
13 precisely what this case was about, those statements were
14 made prior to the Court's -- the Court's order requiring
15 that SCO identify -- I'm sorry -- they were made prior to
16 the summary judgment motion that IBM made and prior to
17 Judge Kimball's order in which he recognized that SCO had
18 not in fact offered any competent evidence of
19 infringement.

20 So, apparently, Your Honor, the notion that
21 that was known in particular is simply unsupportable by
22 the facts here.

23 Now, Your Honor asked a question of Mr. Hatch
24 of why it is that the position SCO takes here would not
25 gut the Court's orders. And the answer you got, Your

1 Honor, respectfully, was a non-answer. The answer you
2 got was that JFS is an important part of SCO's case and
3 that SCO identified the JFS file from the beginning of
4 the case, and it's part of their copyright case,
5 Mr. Hatch said. And then he stood and corrected himself
6 and said it was both part of the contract and the
7 copyright case.

8 It's part of -- according to the final
9 disclosures, Your Honor, it's part of the contract case.
10 It's only part of the contract case. Mr. Hatch suggested
11 that there was a single file that was disclosed and that
12 we have known that from the beginning. There was a JFS
13 file that was disclosed. It was in the final
14 disclosures, and this motion is not about that file.
15 This motion is about the other files which are identified
16 for the very first time in SCO's expert reports.

17 Mr. Hatch talks much, Your Honor, of this
18 notion of non-literal infringement, and the suggestion
19 seems to be that if your case is about non-literal
20 infringement, you are free and clear of any order of the
21 Court, of any discovery request, of any obligation
22 whatever to tell your adversary what specifically the
23 case is about. It's similar, Your Honor, but worse than,
24 I would submit, SCO's methods and concepts argument.

25 The idea there was: This is about methods and

1 concepts, so there is no version, file and line
2 information to disclose. Well, that argument, Your
3 Honor, as you well know, was rejected. It was rejected
4 by Your Honor. It was rejected by Judge Kimball. And
5 the allegations here about non-literal infringement
6 ~~somehow not being something that SCO was required to~~
7 disclose, amount to saying, Judge, that the more vague
8 the allegation, the more abstract it is up from the
9 actual code, the less they have to tell us about it.

10 So, you know, if it's about specific source
11 code, we can be told, but the more abstract they choose
12 to make their theory, the less we get to know about what
13 the theory is. The opposite is true, Your Honor. As a
14 case gets more abstract, more explanation, more
15 particularity and more detail is required, which is why
16 our order -- which is why our request of SCO and of the
17 Court was that they be required to provide specificity
18 and detail.

19 That doesn't mean less with respect to
20 so-called non-literal elements, it means more. Saying,
21 Your Honor, that they mentioned a couple of lines of code
22 in the final disclosures, and, therefore, that was enough
23 to tip us off to this notion of non-literal infringement,
24 Your Honor, is like saying that the mere mention of a
25 couple of lines of code in the final disclosures is

1 enough to tell us that the entire system was claimed.
2 It's like saying the use of a word is enough to disclose
3 to us that the whole English language is being claimed or
4 that the mention of a brick and mortar or of nails and
5 wood somehow tells us the particulars of a structure.

6 ~~If structure is what SCO wishes to claim, and~~
7 they are now citing their own public statements of having
8 approached this theory years ago, then we should have
9 been told what it is in its particulars. What it is it
10 about the structure? What is it about the sequence?
11 What is it about the organization? We have never been
12 told that, Your Honor. The first suggestion of that was
13 the Cargill report.

14 Mr. Hatch suggests there's no big deal here.
15 Just go out and do a report like Cargill. The Cargill
16 report, Your Honor, is rife with generalities. IBM is
17 accused of having, in a still abstract and ill-defined
18 way, failed to disclose the structure, which we didn't
19 hear about in any particular way, until SCO's expert
20 reports.

21 Your Honor, what does IBM want? Again, what we
22 want is the particulars of exactly what it was. That's
23 what they were required to provide. That's what they
24 didn't provide. Now, Mr. Hatch has suggested, again,
25 Your Honor, that IBM knew all along. And I don't want to

1 belabor this point too much, but, again, the suggestion
2 of -- because the word "structure" was used, we knew, is,
3 frankly, absurd.

4 I mean, the reason we asked discovery requests,
5 the reason that the Court entered orders requiring
6 particularity, the reason, I would submit, that Judge
7 Kimball said what he said, is because merely mentioning
8 the word "structure," like mentioning the word "breach of
9 contract" or "breach of non-disclosure provision" tells a
10 person nothing.

11 It's been suggested by SCO here today and in
12 its briefs that IBM's experts have already looked at
13 these questions. That's absolutely untrue, Your Honor.
14 That assertion is -- has no support whatsoever. None is
15 offered in SCO's papers, and the citations to which they
16 refer do not show that, and Professor Kernagen and
17 Professor Davis, who were mentioned here today, made
18 perfectly clear in their papers that they didn't address
19 this.

20 It simply wasn't and isn't possible, Your
21 Honor, to go from a six-month analysis of 326 lines of
22 code, which they labored over, to now be required to
23 disclosure every version -- to be required to evaluate
24 every line and every file of an operating system
25 comprised of millions of lines of code. Mr. Hatch calls

1 the 5-million-line-of-code number faulty, Your Honor.
2 The number is not faulty. The number is the number that
3 corresponds to that which is disclosed in SCO's expert
4 reports.

5 Now, the suggestion further has been made that
6 ~~we failed here to demonstrate prejudice. I would suggest~~
7 to you, Your Honor, that the prejudice here is
8 self-evident. The Court previously found prejudice.
9 Judge Kimball found prejudice, and it is far more extreme
10 here. Here we are being asked to do an analysis as to
11 something that has never been disclosed except, now, even
12 in a general way, until SCO's expert reports.

13 326 lines took six months, Your Honor.
14 Evaluating anything and everything would take an
15 extraordinary amount of time. Mr. Hatch impunes the
16 25,000-man-hour number, which he calls 21,000. It's not
17 my number, Your Honor. It's the number of SCO's
18 witnesses who submitted affidavits in support of SCO's
19 opposition to IBM's summary judgment motion.

20 SCO suggested the fact that the trial has
21 slipped is somehow immaterial, and now there's adequate
22 time, and we can run out and knock off a few depositions
23 and ask their guy a couple of questions and all will be
24 well. That's not the way, Your Honor, that one properly
25 prepares a defense to allegations of copyright

1 infringement.

2 And I would refer you to tab 5 of the book.

3 And if you look, if you would, please, at some of the
4 copyright cases and the principles that are relevant
5 there and the questions that correspond to them, and an
6 enormous amount of effort is required to do a

7 line-by-line, file-by-file analysis of this overall,
8 still ill-defined structure to which Mr. Hatch refers.

9 Mr. Hatch mentions the JFS files and the
10 testing technology files and says he doesn't understand
11 what's happening here, we're like ships passing in the
12 night, that there's really no issue there. Your Honor,
13 in SCO's opposition papers, what they say, and why we
14 made very little of it in our reply, is that that isn't
15 actually allegedly misused material. Yes, they concede
16 in their opposition brief, though Mr. Hatch suggests
17 otherwise here today, that that material is in fact, you
18 know, not new.

19 The material is absolutely, unquestionably new.
20 It was not in the final disclosures, and they have not
21 pointed you to a single line in the final disclosures
22 where it's found. If they showed you the final
23 disclosure item, Your Honor, what you would see is that
24 it says "for example," and they mention the JFS file that
25 was identified.

1 So, the suggestion seems to be that it's enough
2 in the final disclosures to have said "for example," and
3 point to a line so that you can later come around and
4 say, "Well, gee, we gave you an example, so now we can
5 claim anything and everything related to JFS."

6 In SCO's opposition papers, what they say about
7 JFS and the testing technology is, "Yes, this stuff
8 wasn't mentioned specifically in the final disclosures,
9 but it's no big deal because we aren't arguing that IBM
10 misused it. So, what's the problem? We don't understand
11 the disconnect."

12 I would say to SCO that, well, then, if that's
13 right, Your Honor, they should have no problem
14 stipulating that the JFS code and the testing technology
15 code is not allegedly misused information. We read their
16 opposition papers. We called -- picked up the phone and
17 called them and said, "There seems to be a problem here.
18 You're saying it's not misused. Why don't we just
19 stipulate that this isn't misused?"

20 They declined. If the material is not
21 allegedly misused as it relates to JFS and testing
22 technology, then they ought to stipulate to that and not
23 pretend, you know, Your Honor, otherwise.

24 THE COURT: Mr. Marriott, wrap up, please.

25 MR. MARRIOTT: Your Honor, with that, I will

1 close.

2 THE Court: All right.

3 MR. HATCH: A couple points, Your Honor, and
4 I'll try to be brief. One as to JFS. Their motion
5 doesn't try to dispose of all JFS, just what they claim
6 was improperly disclosed. The problem with that is: If
7 you go to item 1 of the disclosures in December 2005, we
8 disclosed the JFS system. So to sit here and say there
9 is anything new that wasn't disclosed before is just not
10 correct. Okay.

11 We have talked about other things, about other
12 examples from System V, but that's another topic. That
13 doesn't have anything to do with their trying to limit
14 the expert talking about JFS. It was disclosed, every
15 line. And he didn't dispute that. He talked around
16 that, quickly, but I want to make it very clear that that
17 is still there.

18 Now, when we get to Mr. -- Dr. Cargill's
19 report, Mr. Marriott talked about the man hours and these
20 kinds of things. I find that kind of interesting because
21 the reason I find it so irrelevant every time I come to a
22 hearing and we hear about the thousands of man hours of
23 work that it would take to do something, is that what
24 they are doing when they talk about that, particularly in
25 the context of a copyright claim, is they are completely

1 ignoring that that is the exact reason why the Tenth
2 Circuit, in Gates Rubber, gave a test that didn't require
3 any party to do that because the Tenth Circuit
4 understood -- and that's why I think the Tenth Circuit is
5 really the leading Circuit on dealing with copyright in
6 the context of computer software -- they understand
7 nobody can do that.

8 We can't do that. What makes them think we can
9 do that any more than he can do that? But the Tenth
10 Circuit recognized that, and that's why they allowed --
11 they provide, in case law, a structural analysis so you
12 wouldn't have to do that. So, for him to sit here and
13 say they would have to do 25,000 man hours is just
14 completely disingenuous because that's not the law. That
15 is not how you do it. They would be doing it improperly
16 under Tenth Circuit law, and it's a complete red herring.

17 And it's made to kind of -- to scare up a
18 prejudice that doesn't exist, and it shouldn't be looked
19 at.

20 THE COURT: Don't you concede that Judge
21 Kimball has already determined that IBM suffered
22 prejudice? I recall reading that order.

23 MR. HATCH: But we're talking about -- in the
24 last order?

25 THE COURT: I don't believe it was this last

1 order.

2 MR. HATCH: Which order? Well, I mean, let's
3 put it in context for that. In this particular instance,
4 I'm saying they haven't suffered any prejudice because
5 what I'm saying is: What they are trying to do is -- the
6 only way to give them what they want is -- would have
7 been to file Dr. Cargill's report in December of 2005
8 instead of when Judge Kimball asked it to be filed.
9 Bottom line, that's what this is about.

10 They are trying to keep out an expert report
11 that doesn't rely on new information, it gives the legal
12 theories behind what they understood -- and, again, I
13 read from their own briefs, from 2004 -- they understood
14 was coming. He puts the meat on it. He wasn't required
15 to do that prior to May of 2006, from Judge Kimball's own
16 order, and so it makes no sense to sit here and argue
17 that as to -- there were things that the Judge ordered
18 and Your Honor ordered for us to do with specificity, but
19 never was it put the expert theories in specificity at
20 that -- at an earlier date than what was required by
21 Judge Kimball's order.

22 Now, what they are essentially arguing here is,
23 he says, "Well, what are we supposed to do with this
24 Cargill report?"

25 We say -- they say it says all these

1 generalities. Well, what I'm hearing is a totally
2 different motion. That is not a motion to exclude
3 evidence because we didn't disclose misused information
4 because we say that's not true. What they are
5 essentially saying is -- and I think the appropriate way
6 for them to attack the Cargill report, given what
7 Mr. Marriott just said -- if he says it's rife with
8 generalities, it's not supportable, it's not good -- he's
9 essentially saying it's not a good opinion.

10 Well, they've got plenty of opportunities to
11 attack it, then. They can attack it by opposing it with
12 another expert saying that he's full of -- he's full of
13 it. He's wrong. It's a bad opinion. They have the
14 right to do that through another expert, if they can.
15 They have the right if, for some reason they think his
16 analysis is faulty, to challenge him under a Dauber
17 challenge. It isn't to come in and try and get some
18 technical way to throw the expert out.

19 It's isn't to come in and claim that he should
20 have given his opinion in December, 2005, when it wasn't
21 due until May of 2006.

22 He did not say -- and I said this in my opening
23 argument. What is it that we should have said about
24 Dr. Cargill before he gave an opinion? And he didn't get
25 up and tell you what he should have said. The most he

1 says is, "Gosh, if he had given us lines -- version,
2 lines and file, then we would have had something to go
3 on."

4 But that wasn't required. We would have never
5 given him that because that's not the analysis that we
6 were making.

7 He indicated the prejudice is self-evident.
8 That's another way of saying that I don't have a
9 prejudice that I can specifically speak to. Then he went
10 back to the lines and code again. I just don't think
11 that's it. He talked about the 25,000 man hours. That's
12 not prejudice because that's not required here. No one
13 is asking him to do that. We didn't do that. You can't
14 talk about -- we're not facing a trial. He has the
15 ability to enter an expert report.

16 I would say, Your Honor, and I think -- the
17 remedy I have seen Courts give, and I don't think it's
18 particularly appropriate here, but the remedy I have seen
19 is -- and the reason I don't think it's appropriate -- is
20 giving them another shot to depose, for instance,
21 Dr. Cargill, is because they refused to ask him about his
22 opinion on these things. It was sitting there in front
23 of their face, and they didn't ask -- they had the right
24 to ask about and then argue later that it's not relevant,
25 argue later that it's a bad opinion, but they didn't do

1 that.

2 So, I think they had that, but if there was
3 even a slightest bit of prejudice, because somehow Mr. --
4 that IBM doesn't understand Dr. Cargill at this point,
5 then they would be -- the appropriate remedy would be to
6 give them an opportunity to retake his deposition for a
7 limited period of time on that specific subject and then
8 their expert can -- their expert can rebut that.

9 But he hasn't asked for that here. He has
10 asked for an extraordinary remedy that Tenth Circuit law,
11 Seventh Circuit law, virtually every Circuit in this
12 country says is the disfavored one, which is: He wants
13 to exclude evidence because he wants to avoid seeing the
14 merits.

15 If the merits are so bad, as he says, then
16 counter it. Counter it with an expert. Counter it
17 with a Dauber petition. Counter it with something, but
18 don't come in and make technical arguments and try to get
19 out of substantive claims that way.

20 Thank you, Your Honor.

21 THE COURT: Thank you, Mr. Hatch.

22 Counsel, I'm prepared to rule. The Court
23 orders as follows: That, as provided in this Court's
24 order of July 1 of 2005, agreed to by the parties through
25 stipulation, reaffirmed by this Court's subsequent order

1 of June 28 of '06 and in yesterday's order by Judge
2 Kimball, SCO may not challenge as misused, by expert
3 report or otherwise, any material not specifically
4 identified as misused by IBM in the final disclosures.

5 And, Mr. Marriott, if you or Mr. Schaughnessy
6 ~~will prepare that order.~~

7 MR. MARRIOTT: Yes, Your Honor.

8 THE COURT: All right. Anything further?

9 MR. HATCH: I would only ask: Is the Court
10 going to give clarifications on what it views as not
11 specified as misused, or are we leaving that for another
12 day?

13 THE COURT: We'll leave that for another
14 time.

15 MR. HATCH: Okay. And that would be included
16 in the order, too, I suppose?

17 THE COURT: What is counsel for IBM's response
18 to that? I think it's fairly clear based upon the
19 arguments. I don't see why we need to do that,
20 Mr. Hatch. I think it's all encompassed in the previous
21 orders of this Court and stipulations that, if it wasn't
22 disclosed by -- let's see, what is it -- October 28,
23 2005, the interim deadline, and the final deadline
24 December 22 of 2005, then it's out.

25 MR. MARRIOTT: And, Your Honor, I think -- my

1 difficulty is: I think it is as plain as day what the
2 Court's orders previously said, and I believe I
3 understand this order. I am, at the same time, a hundred
4 percent confident that my friends at SCO take the
5 position that there is absolutely nothing that wasn't
6 disclosed with specificity, Your Honor. I don't think
7 that can be reconciled with the facts in any, way, shape
8 or form, but I am happy, Your Honor, as a solution to
9 today's problem to have Your Honor's reaffirmed order
10 that material not identified with specificity in the
11 final disclosures, which I take to include structure,
12 sequence and anything else that they want to claim as
13 part of their case, is out.

14 And this very issue is, of course, raised in
15 connection with IBM's summary judgment papers because we
16 asked for summary judgment as to the 326 lines of code.
17 And the answer back is: Ah, but you're forgetting
18 everything else.

19 THE COURT: Well, that is my intent. That is
20 the intention of this order. All right. I adopt IBM's
21 reasoning in this regard.

22 MR. MARRIOTT: Thank you, Your Honor.

23 THE COURT: And you can take that up with Judge
24 Kimball, again, if you wish to do that. All right.
25 Anything further?

1 MR. MARRIOTT: Not here, Your Honor.

2 THE COURT: All right. We'll be in informal
3 recess.

REPORTER'S CERTIFICATE

STATE OF UTAH)
) ss.
COUNTY OF SALT LAKE)

I, REBECCA JANKE, do hereby certify that I am a
Certified Court Reporter for the State of Utah;

That as such Reporter I attended the hearing of
the foregoing matter on November 30, 2006, and thereat
reported in Stenotype all of the testimony and
proceedings had, and caused said notes to be transcribed
into typewriting, and the foregoing pages numbered 1
through 66 constitute a full, true and correct record of
the proceedings transcribed.

That I am not of kin to any of the parties and
have no interets in the outcome of the matter;

And hereby set my hand and seal this 2nd day of
February, 2007.

REBECCA JANKE, CSR, RPR, RMR
